

Figure D1. Geochemical trends across the proglacial sampling sites. Values are shown as mean \pm standard deviation for each site. These figures report the variables that were significantly correlated (p -value < 0.05) to site distance from the ice edge in the Spearman's rank correlation tests (results shown in Table 1).

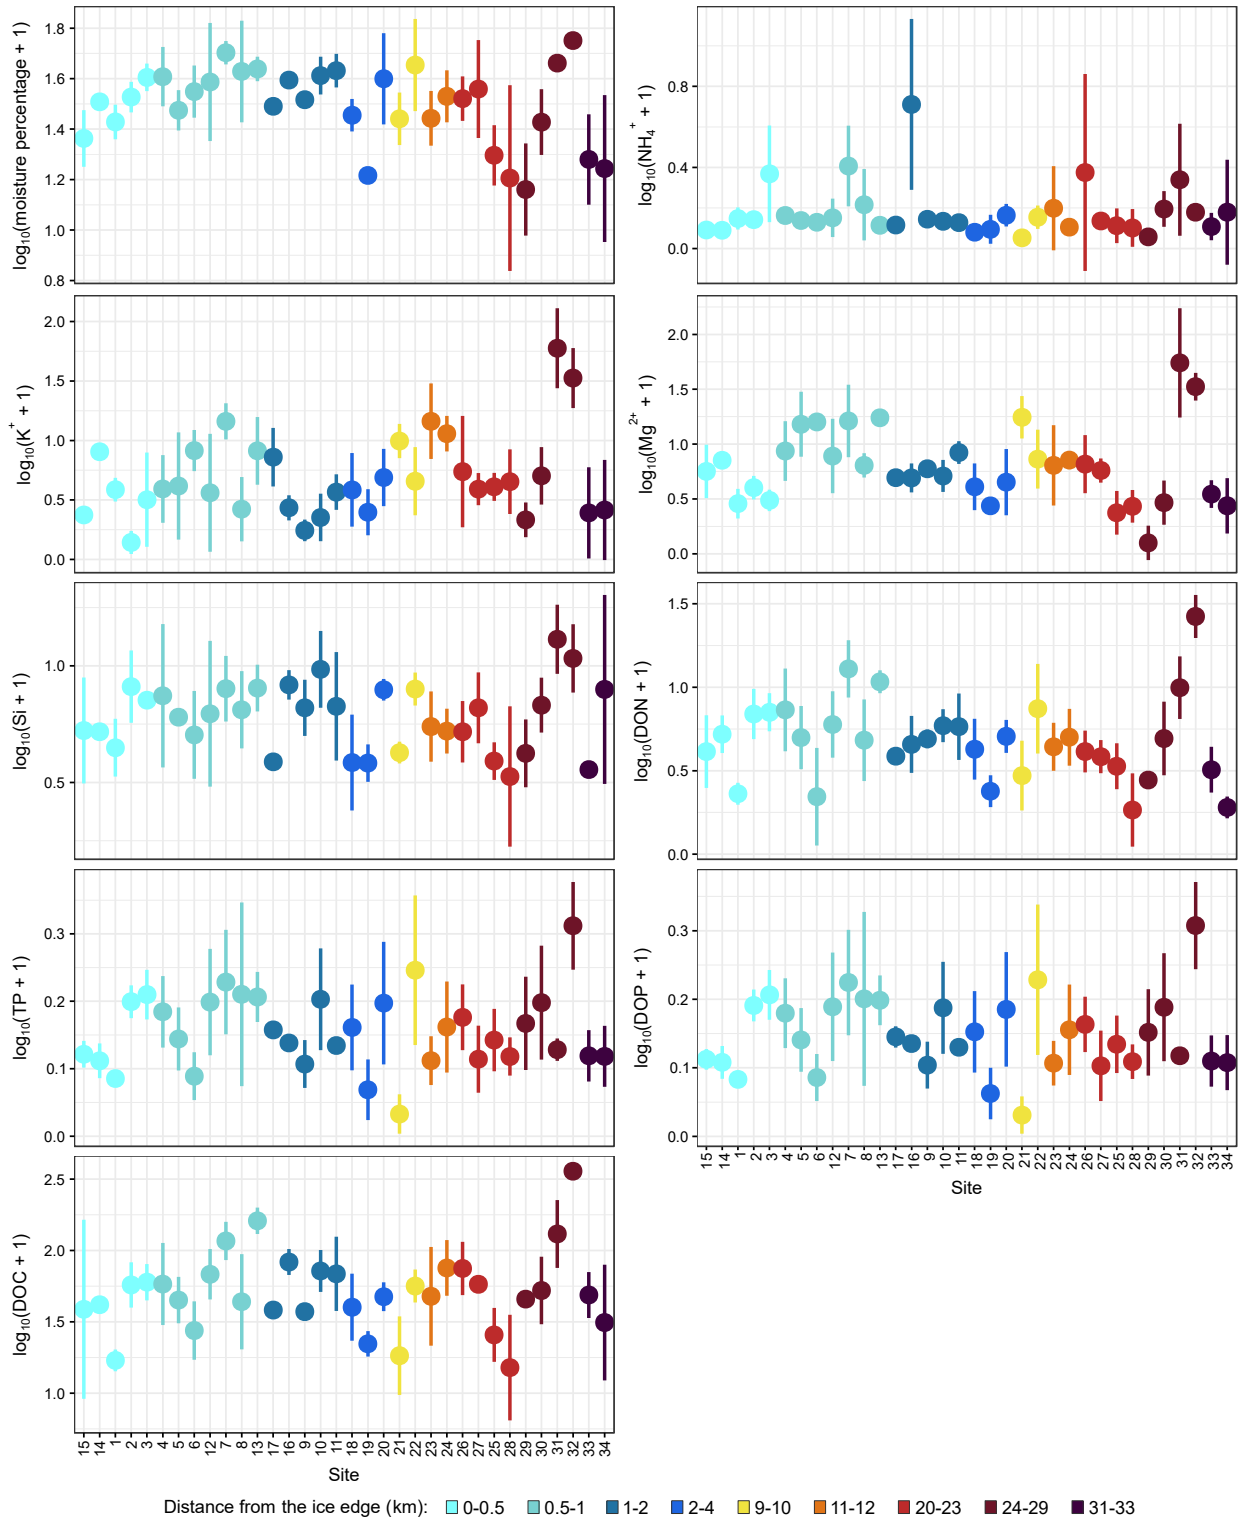

Figure D1 continued. Geochemical trends across the proglacial sampling sites. Values are shown as mean \pm standard deviation for each site. These figures report the variables that were not significantly correlated (p -value ≥ 0.05) to site distance from the ice edge in the Spearman's rank correlation tests (results shown in Table 1).
